

SUCCESS STORY

Signatur-Box enables digital notary services

Secure digital notary's office

NTB SOLUTIONS is regarded as the backbone of digitalization in the Austrian notary's office. For them, digitalization does not mean simply converting analogue to digital media, but "rethinking processes holistically from the ground up, thinking digitally". An essential component of the digital notary's office is the Signatur-Box.

NTB SOLUTIONS' "Datenraum Notare" enables notaries to get in touch with their clients and other organizations and to securely design various work processes with clients digitally. The tool can be used to hold video conferences and sign documents with a qualified signature. It also enables the secure revision and logging of documents and appointments.

Added value for everyone

The aim of NTB SOLUTIONS is to create added value for its customers and increase efficiency. However, quality and transparency are clearly at the forefront, with user acceptance and user-friendliness also being key aspects.

The Signatur-Box is a tool that provides support in meeting these high standards: It ensures that no data leaves the IT environment of NTB SOLUTIONS. In addition, the signature using QES is the most secure form of signing and offers the best transparency. The more than 4 million A-Trust users are familiar with the use of QES for authentication and signing, which creates additional trustworthiness and acceptance for the solution.

Protecting sensitive data

Compliance, security and data sovereignty are essential in the digital notary's office and were therefore reasons for the decision to implement the A-Trust Signatur-Box. As sensitive documents are processed on behalf of the notary's office, they must be protected in the best possible way at all times.

"In terms of notarial confidentiality, it was essential that our entire solution was on premises. That's why the Signatur-Box actually made it possible for us to provide a solution that complies with notarial regulations," summarizes Manfred Guttman, Managing Director of NTB SOLUTIONS GmbH.

Strong recommendation

The feedback on the integration is consistently positive: "In retrospect, it worked very well. The nice thing about SMEs working together is that you can quickly get in touch with competent people and that makes everything easier."

NTB SOLUTIONS also uses other A-Trust features such as the qualified time stamp and long-term validation as well as the qualified company seal via the Signatur-Box.

"The Signatur-Box is easy to integrate and the on-premises solution offers the highest level of compliance. We wanted a system that works reliably and in 2 years we haven't had the slightest problem. I would recommend it without reservation," summarizes Manfred Guttman.

Industry
IT services for Austrian notaries
Number of employees
50
Headquarter
Vienna

NTB SOLUTIONS GmbH (NTBS) is the digital backbone of the Austrian notary's office.

The more than 50 employees of NTBS develop and provide IT solutions for notary's offices and professional institutions, support the development of knowledge about technical solutions and operate and maintain central facilities of the notary's office.

"The decision to use the Signatur-Box was a ,no-brainer' for us because we wanted to ensure that the documents were processed exclusively in our data center."

Ing. Manfred Guttman, Managing Director of NTB SOLUTIONS GmbH
